

Postcards From Camp: People & Places

Since the first Landsat satellite launched in 1972, the world population has doubled. Data from Landsat show us how cities have grown and reshaped Earth's landscapes over the last half-century and has helped city planners make better decisions about urban development. Founded by the Greeks, Naples city center is the largest in Europe (1,700 hectares) with a history going back 27 centuries. Today, the sprawling Naples metropolitan area is home to around 4 million people. Image: Landsat 8 image of Naples, Italy, acquired 2013.
