

DISASTERS: Volcanic Eruption in Russia

Whether it is imaging landslides, wildfires, floods or volcanic eruptions, Landsat can help first responders and disaster management teams plan effective strategies to deal with natural disasters. Erupting volcanoes glow in false-color images, such as this one of Klyuchevskaya in Russia, taken October 20, 2013, where the heat from lava flows stand out from the ash and clouds. *Credit: NASA Earth Observatory*
